Subject: Initial thoughts on IG report

Alison: Just to add...we had told the IG that we have had conference calls with community group leaders in WV to keep them up to speed with what's been going on and I believe it helps that they know and thus are not "pounding down our doors."

Subject: RE: Notes from RA Staff meeting

Cristina: I looked very quickly at the draft. Basically it says EPA should immediately meet with communities with high risk EtO estimates. The report said we should be meeting in R3 with communities near [Nonresponsive based on revised scope] Union Carbide and [Nonresponsive based on revised scope] As of right now, [Nonresponsive based on revised scope] [Nonresponsive based on revised scope], we are sharing new modeling risk results (using local met data and process info) for Union Carbides (both at Institute and S. Charleston) and [Nonresponsive based on revised scope] [Nonresponsive based on revised scope] High risk estimates from 2014 NATA is a starting point for more in depth assessments, we are informing our states with more recent information and encouraging on-the-ground analyses.

By the way, in App. B, it lists Bayer Material Science as a source...it is now called Covestro, it is next to the Union Carbide in S. Charleston for which we included in the new modeling risk results.
